VIZOO  CPP STUDIOS

Vizioline™

Vizioline is a specially-coated gauze created for large holographic installations. During visual playback, it provides a brilliant reflection quality and image vibrancy. With sizes that can extend across the entire stage area and the presentation of life-size, virtual characters, it allows spectacular productions of real and virtual persons, products and architectures to be produced on the same stage.

From Quick-Setup frames for speedy speaker duplication up to and including the realization of complete virtual backgrounds, Vizioline offers enormous structural flexibility.

Installations can also be used in outdoor areas in weather-protected locations. As with holo systems, the place of operation should be shielded from direct exposure to light.

Vizioline™ Stage

1
Dimension:
standard height 3 m with
unlimited width (larger installa-
tions available upon special
request)

Weight of complete Installation:
dependent on the individual
project

2
Standard resolution:
according to project, depending
on the projector

To achieve the best possible pseudo-hologram effect and present your content as dynamically as possible, we advise developing a visual concept that incorporates the system's technical features. The illusion of objects floating freely in space is most convincing when all elements of the visual content, without contours, are in constant motion before a black background.

Hi-contrast, radiantly colored visual content is essential. Basically, Vizioline, enables video films, as well as animations and 3D objects to be presented, when they are adjusted to the system's technical requirements. The required resolution depends on the respective hardware used. High resolution and the use of bright full HD or 4K projectors improves image quality and impact.

Vizioline™ Frame

Dimensions:
190 cm x 245 cm x 300 cm
(WxHxD)

Built-in:
media player, screen or LED-
wall modules

Screen size:
max. 190 cm x 212 cm (WxH)

Customized Vizioline frames or brackets can be produced upon client request.

Vizioline™

If you would like to use the Vizioline-system to present your product

We offer you full support in content development and advise you on how to achieve the best possible results for your presentation. Alternatively, we can offer an additional full-service, which encompasses conception as well as the creation of content based on your data, up to and including installation of the system.

You have your own animations or 3D objects, which you would like to present with Vizioline technology?

Here, too, we are happy to provide support for the system-optimized preparation of your content. To create animations, we require your 3D product data in a polygon format of current 3D Software, e.g. Maya (.mdl), XSI (.xsi), 3D-Studio-Max (.max), Wavefront Object (.obj), Cinema4D (.c4d) or Modo (.lxo).
